

2,12x12 mm FDX-B RFID Dog Micro Chip ID animale ID microchip Capestro Cattle Pieta

Specifiche

Specifiche

Nome prodotto	Microchip Animal Microchip Tracking CHIP Micro RFID Dog Implant ID Animal ID Chip Microchip per animali domestici per gatti di bestiame
Chip	EM4305
Frequenza	125kHz
Distanza di lettura	3-20 cm dipendono dal tuo lettore e chip
Materiale	Bio-vetro
Protocolle	ISO14443A
Misurare	2*12mm, 3*15mm, 1.4*8mm, 1.25x7mm ecc
Metodo di disinfezione	EO (ACM)

Tipo	Passivo
Luogo di origine	Guangdong, Cina
Memoria	144Byte/504byte/888byte
Campioni	I campioni sono gratuiti per il tuo test di qualità.
Applicazione	Gatti, cani, topi da laboratorio, visone per animali domestici, arowana, salmone, cavalli, tracking dei conigli ecc.

Pet informatin tracking

- 134.2K/125K FDX-B format with 16-bit encoding, most scanners can be read
- Small size and light weight
- Quickly and safely injects under the surface of pet's skin
- Wide range of applications, suitable for most pets, animal husbandry, fish, wildlife, etc.

WORKING PRINCIPLE

How Does Animal Microchip Work?

1. Scan the pet to verify whether he or she has a microchip that has been previously implanted.

2. Scan the microchip pack to verify that the microchip is functional, and that the ID code matches the accompanying barcode labels.

3. Implant the microchip, then rescan the pet to verify that the microchip can be localized.

4. Do not forget to record the tracking number of the microchip.

Implantation Sites for Microchips

Microchips are most often implanted in animals as outlined in the diagrams above. When scanning dogs and cats, begin in the neck area where the microchip is most likely to be located, but be sure to scan slowly and patiently. Scan repeatedly and over the entire body to ensure whether or not a microchip can be localized.

CUSTOMIZATION

Anti bacterial
