RFID

RFID/NFC

RFID is a technology that uses radio waves to identify and track tags attached to objects.

UHF is a type of RFID that operates in the ultra-high frequency range (860-960 MHz).

NFC (Near Field Communication) is a type of RFID that operates at 13.56 MHz and allows for short-range communication between devices.

NFC tags can be used for a variety of applications, including contactless payments, access control, and product authentication. NFC tags are also used in Google Play for digital rights management (DRM) and in Amazon for product identification.
