

# QR Code and NFC Technology for VIP Access

RFID

RFID vs NFC

RFID(Radio Frequency Identification) is a technology that uses electromagnetic waves to identify and track objects. It is widely used in logistics, retail, and security.

UHF RFID tags are used for long-range identification, while HF and LF tags are used for short-range applications like NFC.

NFC (Near Field Communication) is a subset of RFID technology that allows for very close-range communication between devices.

NFC is used for contactless payments, access control, and data exchange between smartphones and NFC-enabled devices.
