How Does Animal Microchip Work?

1. Scan the pet to verify whether he or she has a microchip that has been previously implanted.

2. Scan the microchip pack to verify that the microchip is functional, and that the ID code matches the accompanying barcode labels.

3. Implant the microchip, then rescan the pet to verify that the microchip can be localized.

4. Do not forget to record the tracking number of the microchip.

Implantation Sites for Microchips

Microchips are most often implanted in animals as outlined in the diagrams above. When scanning dogs and cats, begin in the neck area where the microchip is most likely to be located, but be sure to scan slowly and patiently. Scan repeatedly and over the entire body to ensure whether or not a microchip can be localized.

WHY YOU CHOOSE US AS YOUR PARTNER

NO. 1 MATERIAL

Material is medical grade bio-glass
with working life as long as 20 years

NO. 2 STERILIZATION

Sterilized by EO for 48 hours to
protect animal from being infected.

Safe enough to be injected
into animal body.

NO. 3 CHIP

Imported original chip. Long reading range and long working life

ISO11784/5, FDX-B, Chip Type: EM4305

ISO14443A/15693, Chip Type: NFC 216, etc

NO. 4 VARIOUS SIZES

NO. 5 **VARIOUS MODELS AND COLORS**

SYRINGES FOR ANIMAL ID TAGS
