

Animal Pet Microchip 2.12 * 12mm Rfid Pet Microchip ISO11784/85 LF 134.2khz Identification Microchip

Specification

Specification

Product name	Animal Microchip Horse Tracking Chip Micro Rfid Dog Implant Animal Id Chip Microchip For Cattle Cat Microchip Pets
Chip	EM4305
Frequency	125KHZ
Reading Distance	3-20cm depend on your reader and chip
Material	Bio-Glass
Protocal	ISO14443A

Size	2*12mm, 3*15mm,1.4*8mm,1.25x7mm etc
Disinfection Method	EO (ACM)
Type	Passive
Place of Origin	Guangdong,china
Memory	144Byte/504Byte/888byte
Samples	Samples is free for your quality test.
Application	Cats, dogs, laboratory mice, pet mink, arowana, salmon, horses, rabbits tracking etc.

Pet informatin tracking

- 134.2K/125K FDX-B format with 16-bit encoding, most scanners can be read
- Small size and light weight
- Quickly and safely injects under the surface of pet's skin
- Wide range of applications, suitable for most pets, animal husbandry, fish, wildlife, etc.

WORKING PRINCIPLE

How Does Animal Microchip Work?

1. Scan the pet to verify whether he or she has a microchip that has been previously implanted.

2. Scan the microchip pack to verify that the microchip is functional, and that the ID code matches the accompanying barcode labels.

3. Implant the microchip, then rescan the pet to verify that the microchip can be localized.

4. Do not forget to record the tracking number of the microchip.

Implantation Sites for Microchips

Microchips are most often implanted in animals as outlined in the diagrams above. When scanning dogs and cats, begin in the neck area where the microchip is most likely to be located, but be sure to scan slowly and patiently. Scan repeatedly and over the entire body to ensure whether or not a microchip can be localized.

CUSTOMIZATION

Anti bacterial

Anti bacterial

Easily implanted

Easily implanted

Anti allergy
