The image displays three different styles of yellow TPU RFID animal ear tags. One tag is a simple rectangular shape, another is a circular disc with a central hole, and the third is a larger, more complex shape with a circular cap. Below the tags, a group of farm animals is shown, including a horse, a cow, a sheep, a pig, chickens, and a donkey, illustrating the application of these tags.

The Application of Laser Series Number Various Size TPU High Quality UHF RFID Animal Ear Tag

The Animal Ear Tag can be used in large or medium size livestock or animals, such as pig, cow, lamb, horse, deer, dog and so on.

It can be widely applied in all the field of imformation management for animals and livestock, such as breeding population, epidemic prevention and quarantine control.

How Does Animal Microchip Work?

1. Scan the pet to verify whether he or she has a microchip that has been previously implanted.

2. Scan the microchip pack to verify that the microchip is functional, and that the ID code matches the accompanying barcode lables.

3. Implant the microchip, then rescan the pet to verify that the microchip can be localized.

4. Do not forget to record the tracking number of the microchip.

Implantation Sites for Microchips

Microchips are most often implanted in animals as outlined in the diagrams above. When scanning dogs and cats, begin in the neck area where the microchip is most likely to be located, but be sure to scan slowly and patiently. Scan repeatedly and over the entire body to ensure whether or not a microchip can be localized.
