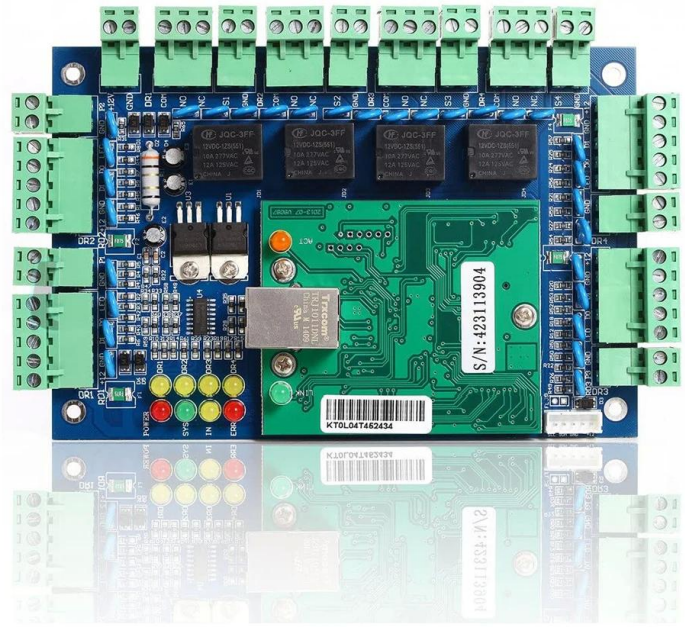
Pr



Entry Door Security System Wiegand Solution Controller Board TCP IP RFID Network Two Door Access Control Panel

This access control board's software provides numerous access control and alarm monitoring features: expiry date for clubs,
automatic activation, time zones, supervision, anti-passback, activity reports...
Each alarm input is programmable: operating mode (NO or NC), time zones, local reflex (activation of outputs according to input status). Specific alarms are triggered according to the number of unsuccessful attempts, the time limit for door closing (door alarm), the duress code...Whenever required, the data stored in the controllers is transferred to the computer and activity reports are printed. Each controller works independently and keeps its own database.
